

TR-FRET RAR gamma Coactivator Assay Kit, goat

Product Information

Cat

Kit-0937

Common Name

TR-FRET

Cat.No.

Kit-0937

Description

The TR-FRET Retinoic Acid Receptor (RAR) gamma Coactivator Assay Kit provides a sensitive and robust method for high-throughput screening of potential RAR gamma ligands as agonists of coactivator recruitment. The homogeneous mix-and-read assay format results in a ligand EC50 composite value representing the amount of ligand required to bind to receptor, effect a conformational change, and recruit coactivator peptide.

How it works

The TR-FRET RAR gamma Coactivator Assay Kit includes a terbium (Tb)-labeled anti-GST antibody, a fluorescein-labeled coactivator peptide, and a human RAR gamma ligand-binding domain (RAR gamma-LBD) that is tagged with glutathione-S-transferase (GST). To assay, RAR gamma-LBD is added to ligand test compounds, followed by addition of a mixture of the fluorescein-coactivator peptide and Tb-anti-GST antibody. After room temperature incubation, the TR-FRET 520: 495 emission ratio is calculated and used to determine the EC50 from a dose response curve of the compound.

Applications

Co-Factor Interaction Assay

Storage

Store in ultra-cold freezer (-68 to -85°C).

Shipping

TR-FRET RAR gamma Coactivator Assay Kit, goat

Dry Ice

Size

800 x 20 µL assays

Kit Components

The TR-FRET RAR gamma Coactivator Assay Kit contains RAR gamma-LBD (GST) protein, fluorescein-labeled PGC1α coactivator peptide, Tb-anti-GST antibody, and buffers. Store components as indicated in the assay protocol (-80°C, -20°C, or +4°C).

Materials Required but Not Supplied

Microplate Reader

Detection method Fluorescent
