

Mitochondrial Membrane Potential Assay Kit (Orange Fluorescence)

Product Information

Cat.No.

Kit-0560

Product Overview

Mitochondrial Membrane Potential Assay Kit (Orange Fluorescence) is a fluorescent assay used to detect cell apoptosis by monitoring the loss of mitochondrial membrane potential with flow cytometry.

Description

This particular kit is designed to detect cell apoptosis by measuring the loss of the mitochondrial membrane potential (MMP). The collapse of mitochondrial membrane potential coincides with the opening of the mitochondrial permeability transition pores, leading to the release of cytochrome C into the cytosol, which in turn triggers other downstream events in the apoptotic cascade.

Applications

This kit is a set of tool for monitoring cell viability. There are a variety of parameters that can be used.

Usage

For research use only (RUO)

Storage

Store the kit at -20°C and avoid from light.

Kit Components

Component A: 500X MitoLite Orange in DMSO 200 μ L
Component B: Assay Buffer 100 mL

Detection method Fluorometric

Compatible Sample Types

Cells
