

ROS Activity Assay Kit II

Product Information

Cat.No.

Kit-0774

Product Overview

ROS Activity Assay Kit is a quantitative fluorometric determination of intracellular total ROS activity.

Description

Reactive oxygen species (ROS) are natural byproducts of the normal metabolism of oxygen and play important roles in cell signaling and homeostasis. However, during oxidative stress-related states, ROS levels can increase dramatically. The accumulation of ROS results in significant damage to cell structures. The role of oxidative stress in cardiovascular disease, diabetes, osteoporosis, stroke, inflammatory diseases, a number of neurodegenerative diseases and cancer has been well established. The ROS measurement will help to determine how oxidative stress modulates varied intracellular pathways. ROS Activity Assay Kit uses our unique ROS sensor to quantify ROS in live cells. ROS Red is cell-permeable. It generates the red fluorescence when it reacts with ROS. The kit is an optimized "mix and read" assay format that is compatible with HTS liquid handling instruments.

Usage

For research use only (RUO)

Storage

Keep Component A in freezer (-20°C) and avoid exposure to light; Component B&C at 4°C. All components are stable for 6 months after receipt if stored properly. Shelf Life: All reagents are stable for 6 months after receipt when stored properly at the recommended conditions.

Kit Components

Component A: ROS Red 1 vial
Component B: Assay Buffer 1 bottle (20 mL)
Component C: DMSO 1 vial (200 µL)

Detection method 650/675 nm

Compatible Sample Types

CREATIVE **BIOMART**[®]
Assay Kit

ROS Activity Assay Kit II
