

## TBARS Assay kit II

### Product Information

---

#### Cat.No.

Kit-0812

---

#### Product Overview

TBARS Assay kit is used for the quantitative determination of thiobarbituric acid reactive substances through the detection of an adduct of malondialdehyde (MDA) and thiobarbituric acid (TBA).

---

#### Description

The sensitivity of measuring Thiobarbituric Acid Reactive Substances (TBARS) has made this assay the method of choice for screening and monitoring lipid peroxidation, a major indicator of oxidative stress. Oxidative stress in the cellular environment results in the formation of highly reactive and unstable lipid hydroperoxides. Decomposition of the unstable peroxides derived from polyunsaturated fatty acids results in the formation of malondialdehyde (MDA), which can be quantified colorimetrically following its controlled reaction with thiobarbituric acid. This assay remains the most widely employed assay used to determine lipid peroxidation.

---

#### Applications

The TBARS Assay kit measures malondialdehyde (MDA), a reactive compound formed from lipid peroxides that are generated under conditions of oxidative stress. Oxidative modification of lipids occurs with aging and various diseases, and increased oxidative stress is associated with diabetes and its complications. MDA forms an adduct with thiobarbituric acid (TBA). Results are calculated from a standard curve constructed with authentic MDA. Exocells TBARS assay can be used with a spectrum of biological samples including body fluids, tissue and cell specimens.

---

#### Usage

For research use only (RUO)

---

#### Storage

Store all kit reagents at 2-8°C. The components should be used before the expiration date indicated on the outside of the box. TBA stock should be refrigerated.

Assay Kit

## TBARS Assay kit II

### Kit Components

---

Microplate for fluorometer. 96 (8x12) wells  
Thiobarbituric Acid stock solution 1 vial  
TBARS Assay Diluent 1 vial  
MDA Standard 10  $\mu$ M Malondialdehyde 1 vial  
Bis(dimethylacetal) 1 vial  
Acetic Acid 1 vial

---

**Detection method** Fluorimetric/Colorimetric

---

### Compatible Sample Types

---

Body fluids, Cell specimens and Tissue

---
