

Triglyceride Quantification Kit

Product Information

Cat.No.

Kit-0815

Product Overview

Triglyceride Quantification Kit is used for measuring TG concentration.

Description

Triglycerides (TG) are the main constituent of vegetable oil, animal fat, LDL and VLDL, and play an important role as transporters of fatty acids as well as serving as an energy source. TG are broken down into fatty acids and glycerol, after which both can serve as substrates for energy producing and metabolic pathways. High blood levels of TG are implicated in atherosclerosis, heart disease and stroke as well as in pancreatitis. The Triglyceride Quantification Kit provides a sensitive, easy assay to measure TG concentration in a variety of samples. In the assay, TG are converted to free fatty acids and glycerol. The glycerol is then oxidized to generate a product which reacts with the probe to generate color (spectrophotometry at $\lambda = 570$ nm) and fluorometric (Ex/Em = 535/587 nm). The kit can detect 2 pmol–10 nmol (or 2-10000 μ M range) of triglyceride in various samples. The kit also detects monoglycerides and diglycerides.

Target Species

Mammals

Usage

For research use only (RUO)

Storage

Store kit at -20°C , protect from light. Warm Triglyceride Assay Buffer to room temperature before use. Briefly centrifuge all small vials prior to opening.

Kit Components

Triglyceride Assay Buffer 25 ml
Triglyceride Probe (in DMSO, anhydrous) 200 μ l
Lipase 1 vial
Triglyceride Enzyme Mix (lyophilized) 1 vial
Triglyceride Standard (1 mM) 0.3 ml

CREATIVE **BIOMART**[®]
Assay Kit

Triglyceride Quantification Kit

Detection method Colorimetric, Fluorometric

Compatible Sample Types

Biological Fluid, Cell Culture Supernatant, Plasma, Serum, Tissue Culture Supernatant, Urine
