Description

The BRD3 (BD2) Inhibitor Screening Assay Kit is designed to measure the inhibition of BRD3 bromodomain 2 (BD2) from binding to its substrate. The key to the BRD3 (BD2) Inhibitor Screening Assay Kit is the highly specific binding of the BRD3 bromodomain 2 to the acetylated histone substrate. With this kit, only three simple steps on a microtiter plate are required. First, a sample containing BRD3 bromodomain 2 and an inhibitor of choice is incubated with the biotinylated substrate for thirty minutes. Next, acceptor beads are added, then donor beads, followed by reading the Alpha-counts.

Applications

Useful for the study of bromodomain binding assays, screening bromodomain inhibitors and selectivity profiling.

Storage

At least 12 months from date of receipt, when stored as directed. Kit components require different storage conditions. Be sure to store each component at the proper temperature upon arrival.
