

## Monoamine Oxidase B (MAO-B) Inhibitor Screening Kit (Fluorometric)

### Product Information

**Cat**

Kit-2362

**Cat.No.**

Kit-2362

### Product Overview

Monoamine oxidases (MAO, EC 1.4.3.4) are a family of enzymes that can oxidize a wide variety of endogenous primary amines. Two isoforms, MAO-A and MAO-B, have been identified based on their substrate, inhibitor specificity, and tissue localization. MAO-B can oxidize primary amines, but its list of specific substrates (i.e. benzylamine, phenylethylamine) is more limited compared to MAO-A. MAO-B is a mitochondrial-bound enzyme that is ubiquitously expressed throughout the brain and other tissues. It has been investigated in numerous studies including Parkinson's disease, Alzheimer's, and tobacco addiction. Specific MAO-B inhibitors such as selegiline, & rasagiline have been used to treat Parkinson's patients, but their benefits are considered rather modest. MAO-B Inhibitor Screening Kit offers a rapid, simple, sensitive, and reliable test suitable for high-throughput screening of MAO-B inhibitors. The assay is based on the fluorometric detection of H<sub>2</sub>O<sub>2</sub>, one of the byproducts generated during the oxidative deamination of MAO substrate.

### Applications

Screening/studying/characterizing MAO-B inhibitors

### Storage

-20°C

### Shipping

Gel Pack

### Size

100 assays

### Kit Components

CREATIVE BIOMART®  
Assay Kit

## Monoamine Oxidase B (MAO-B) Inhibitor Screening Kit (Fluorometric)

MAO-B Assay Buffer; OxiRed; Probe (in DMSO); MAO-B Enzyme (Lyophilized); MAO-B Substrate (Lyophilized); Developer (Lyophilized); Inhibitor Control (Clorgyline) (Lyophilized)

**Detection method** Fluorescence (Ex/Em = 535/587 nm)

### Features & Benefits

Rapid & sensitive; High-throughput assay to screen/study/characterize potential inhibitors of monoamine oxidase B; Includes Inhibitor Control [Selegiline]
