

D-Lactate Assay Kit

Product Information

Cat

Kit-2463

Cat.No.

Kit-2463

Product Overview

Lactate is generated by lactate dehydrogenase (LDH) under hypoxic or anaerobic conditions. Monitoring lactate levels is, therefore, a good indicator of the balance between tissue oxygen demand and utilization and is useful when studying cellular and animal physiology. D-Lactate is produced in only minor quantities in animals and measuring for D-lactate in animal samples is a means to determine the presence of bacterial infection. Simple, direct and automation-ready procedures for measuring lactate concentration are very desirable. Lactate assay kit is based on lactate dehydrogenase catalyzed oxidation of lactate, in which the formed NADH reduces a probe into a highly fluorescent product. The fluorescence intensity of this product, measured at $\lambda_{ex}/\lambda_{em} = 530/585$ nm, is proportional to the lactate concentration in the sample.

Storage

-20°C

Shipping

On Ice

Size

100 tests

Detection method FL530/585 nm

Compatible Sample Types

Serum, plasma, cell culture media etc

Features & Benefits

D-Lactate Assay Kit

Sensitive and accurate. Detection limit of 1 μM and linearity up to 50 μM D-lactate in 96-well plate assay.

Convenient. The procedure involves adding a single working reagent, and reading the fluorescence after 60 min. Room temperature assay.

High-throughput. Can be readily automated as a high-throughput 96-well plate assay for thousands of samples per day.

Assay time

60 min

Sensitivity

1 μM
