

Bovine Foot and Mouth Disease Virus Serotype A Antibody Detection Kit

Product Information

Product Overview

Virus Antibody Detection Kits

Description

Accurately identifies antibodies against FMDV Serotype A in bovine samples.

Size

48t/96t

Applications

- Post-vaccination surveillance
 - National and regional disease control programs
-

Features & Benefits

- High serotype specificity ensures reliable results
 - ELISA format supports high-throughput testing
 - Minimal sample handling requirements
 - Validated for cattle serum and plasma
-
