

Serum-Free Expression System Service — Defining the Future Standard for Recombinant Protein Production

[Recombinant Protein](#) [Protein Analysis](#) [Events](#) [Promotion](#) [Contact Us](#)

Creative BioMart pioneers cell culture innovation, delivering complete serum-free expression solutions from custom medium design to protein purification—engineered to meet the exacting demands of biomedical research and biopharmaceutical development.

Why Go Serum-Free? Break Through Tradition, Take Full Control

Conventional serum-based culture creates bottlenecks for scalable protein production due to undefined composition, lot-to-lot variability, and complex downstream processing. Our serum-free expression system solves these challenges with six core advantages:

- ✓ **Fully Defined Composition** — Precise formulas with no unknown interfering factors
- ✓ **Superior Lot-to-Lot Consistency** — Eliminates serum variability for reproducible results
- ✓ **Streamlined Purification** — No serum protein contamination simplifies downstream workflows
- ✓ **Controlled Physiological Conditions** — Precisely tunable culture environment for stable cell performance
- ✓ **No Serum Qualification Required** — Avoids supply chain risks while reducing costs and QC burden
- ✓ **Tailored Formulations** — Optimized specifically for HEK293, CHO, and insect cell systems

End-to-End Service, One-Stop Solution

1. Custom Serum-Free Medium Development

- Nutrient profiling and scientific formulation (amino acids, vitamins, lipids, trace elements)
- Commercial medium screening and performance evaluation
- Statistical optimization and scale-up validation

2. High-Yield Recombinant Protein Expression

- Large-scale production using optimized serum-free systems
- Dual-platform support for mammalian and insect cells

3. Professional Protein Purification

- Multi-modal chromatography (affinity, ion exchange, and more)
- Purity grades meeting research and industrial standards

Focus on Cutting-Edge Applications, Drive Research Breakthroughs

- ✓ **High-Throughput Protein Production** — Parallel processing of hundreds of targets to accelerate drug screening and functional genomics
- ✓ **Biopharmaceutical Development** — Production-grade platform for antibodies, vaccines, and recombinant therapeutics
- ✓ **Structural Biology** — Homogeneous protein samples enabling crystallography and cryo-EM studies
- ✓ **Cell Therapy Research** — Animal-free media meet preclinical safety requirements

Our Commitment: Expert Team, Personalized Service

Creative BioMart's seasoned specialists bring deep expertise in serum-free technology. We deliver customized strategies aligned with your specific research goals, ensuring optimal expression efficiency and accelerated project timelines.

Beyond Serum-Free — A Diverse Expression Platform Portfolio

In addition to our flagship serum-free systems, we offer multiple protein expression platforms for maximum flexibility.

From research discovery to commercial translation, Creative BioMart is your trusted protein expression partner.

Contact us today to launch your serum-free expression journey!
