

Recombinant Human AIG2-Like Domain 1, His-tagged

Cat. No. A2LD1-964H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human A2LD1 protein, fused to His-tag at N-terminus, was expressed in E.coli and purified by using conventional chromatography.
Species	Human
Source	E.coli
Description	A2LD1, also known as gamma-glutamylaminocyclotransferase, is an enzyme that converts gamma-glutamylamines to free amines and 5-oxoproline. It shows high activity toward gamma-glutamyl-epsilon-lysine, derived from the breakdown of fibrin and other proteins cross-linked by transglutaminases. This protein adopts the newly identified cyclotransferase fold, observed in gamma-glutamylcyclotransferase, an enzyme with a activity toward gamma-glutamyl-alpha-amino acids.
Form	Liquid. 20mM Tris-HCl buffer (pH8.0) containing 10% glycerol, 0.1M NaCl.
Molecular Weight	19.4 kDa (173aa) confirmed by MALDI-TOF.
Purity	> 95% by SDS - PAGE.
Concentration	1.0 mg/ml (determined by Bradford assay).
