

Recombinant Human ACKR2 Protein, His-tagged

Cat. No. ACKR2-212H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human atypical chemokine receptor 2(ACKR2)(NM_001296), with a His tag, was expressed in human cells.
Species	Human
Source	Human Cells
Description	This gene encodes a beta chemokine receptor, which is predicted to be a seven transmembrane protein similar to G protein-coupled receptors. Chemokines and their receptor-mediated signal transduction are critical for the recruitment of effector immune cells to the inflammation site. This gene is expressed in a range of tissues and hemopoietic cells. The expression of this receptor in lymphatic endothelial cells and overexpression in vascular tumors suggested its function in chemokine-driven recirculation of leukocytes and possible chemokine effects on the development and growth of vascular tumors. This receptor appears to bind the majority of beta-chemokine family members; however, its specific function remains unknown. This gene is mapped to chromosome 3p21.3, a region that includes a cluster of chemokine receptor genes.
Form	Purified protein formulated in a sterile solution of TBS buffer, pH7.56, without any preservatives.
Molecular Mass	43.3 kDa
Endotoxin	Endotoxin level is < 0.1 ng/g of protein (<1EU /g)
