

Recombinant Human ALB Protein, C13&N15-labeled, His-tagged

Cat. No. ALB-003H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	ALB is a recombinant, stable isotope-labeled human albumin which incorporates [13C6, 15N4]-Arginine and [13C6, 15N2]-Lysine. Expressed in human 293 cells, it is designed to be used as an internal standard for bioanalysis of albumin in mass-spectrometry. ALB is a monomer of 607 amino acids (including C-terminal polyhistidine and flag tags).
Species	Human
Source	HEK293
Description	This gene encodes the most abundant protein in human blood. This protein functions in the regulation of blood plasma colloid osmotic pressure and acts as a carrier protein for a wide range of endogenous molecules including hormones, fatty acids, and metabolites, as well as exogenous drugs. Additionally, this protein exhibits an esterase-like activity with broad substrate specificity. The encoded preproprotein is proteolytically processed to generate the mature protein. A peptide derived from this protein, EPI-X4, is an endogenous inhibitor of the CXCR4 chemokine receptor.
Form	Supplied as a lyophilized powder containing phosphate buffered saline.
