

Recombinant Human ARG1 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. ARG1-2961H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	ARG1 MS Standard C13 and N15-labeled recombinant protein (NP_000036) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	Arginase catalyzes the hydrolysis of arginine to ornithine and urea. At least two isoforms of mammalian arginase exist (types I and II) which differ in their tissue distribution, subcellular localization, immunologic crossreactivity and physiologic function. The type I isoform encoded by this gene, is a cytosolic enzyme and expressed predominantly in the liver as a component of the urea cycle. Inherited deficiency of this enzyme results in argininemia, an autosomal recessive disorder characterized by hyperammonemia. Two transcript variants encoding different isoforms have been found for this gene.
