SPECIFICATION

Product Overview	Angiopoietin-1 / Ang-1
Species	Human
Source	HeLa
ProteinLength	498
Description	<p>Angiopoietins are proteins with important roles in vascular development and angiogenesis. All angiopoietins bind with similar affinity to an endothelial cell-specific tyrosine-protein kinase receptor. The protein encoded by this gene is a secreted glycoprotein that activates the receptor by inducing its tyrosine phosphorylation. It plays a critical role in mediating reciprocal interactions between the endothelium and surrounding matrix and mesenchyme and inhibits endothelial permeability. The protein also contributes to blood vessel maturation and stability, and may be involved in early development of the heart. Alternative splicing results in multiple transcript variants encoding distinct isoforms.</p>
Form	Lyophilized
Molecular Mass	57,513 Da
Purity	>95% by SDS-PAGE & HPLC analyses
Notes	Small volumes of Ang-1 recombinant protein may occasionally become entrapped in
