

# Recombinant Active Rat Ar Protein (Ligand Binding Domain), GST/His-tagged

**Cat. No.** Ar-01R    **Lot. No.** (See product label)

## SPECIFICATION

<b>Product Overview</b>	Recombinant androgen receptor ligand binding domain (AR-LBD) is a rat protein, expressed as a GST- and His-tagged protein in insect cells. AR-LBD is expressed and purified in the absence of exogenous ligands, making it ideal for ligand-binding and coregulator recruitment studies.
<b>Species</b>	Rat
<b>Source</b>	Insect Cells
<b>Description</b>	Enables several functions, including androgen binding activity; androgen receptor binding activity; and nuclear receptor activity. Involved in several processes, including cellular response to hormone stimulus; mating; and regulation of transcription, DNA-templated. Located in several cellular components, including axon; dendrite; and nucleus. Used to study hypertension; osteoporosis; prostate adenocarcinoma; prostate cancer; and prostatic hypertrophy. Biomarker of acute kidney failure and androgen insensitivity syndrome. Human ortholog(s) of this gene implicated in several diseases, including attention deficit hyperactivity disorder; conduct disorder; disorder of sexual development (multiple); reproductive organ cancer (multiple); and spinal muscular atrophy (multiple). Orthologous to human AR (androgen receptor).
<b>Molecular Mass</b>	64.42 kDa
<b>Storage</b>	Store in ultra-cold freezer (-68 to -85 centigrade).

**GENE INFORMATION**

<b>Gene Name</b>	Ar androgen receptor [ Rattus norvegicus (Norway rat) ]
<b>Official Symbol</b>	Ar
<b>Synonyms</b>	Ar; androgen receptor; Tfm; Andr; androgen receptor; androgen receptor (Testicular feminization), same as Tfm; dihydrotestosterone receptor; nuclear receptor subfamily 3 group C member 4
<b>Gene ID</b>	24208
<b>mRNA Refseq</b>	NM_012502
<b>Protein Refseq</b>	NP_036634
<b>UniProt ID</b>	A0A0G2JSI8
