

Human BMI1 Knockdown Cell Lysate

Cat. No. BMI1-073HKCL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	WB-validated BMI1 Knockdown HeLa Cell Lysate
Species	Human
Source	HeLa
Description	<p>This gene encodes a ring finger protein that is major component of the polycomb group complex 1 (PRC1). This complex functions through chromatin remodeling as an essential epigenetic repressor of multiple regulatory genes involved in embryonic development and self-renewal in somatic stem cells. This protein also plays a central role in DNA damage repair. This gene is an oncogene and aberrant expression is associated with numerous cancers and is associated with resistance to certain chemotherapies. A pseudogene of this gene is found on chromosome X. Read-through transcription also exists between this gene and the upstream COMM domain containing 3 (COMMD3) gene.</p>
Form	Cell-Tissue Lysis buffer
Molecular Mass	37 kDa
Notes	<p>Instruction of use: This knockdown cell lysate should be paired with wild-type HeLa cell lysate for use. For Western blotting, we recommend running wild-type and knockdown lysates on the same gel, and loading each well with equal volume and equal amount of total proteins.</p>
