

## Mouse Brain Membrane Lysate

Cat. No. Brain-50M    Lot. No. (See product label)

### SPECIFICATION

**Species**                      Mouse

**Source**                        Mouse Brain

**Concentration**              2 mg/mL or better

**Tissue Type**                 Brain

**Shipping**                     Dry ice

**Preparation method**

Mouse brain tissue membrane protein lysate was prepared by homogenization using a proprietary technique. The tissue was frozen in liquid nitrogen immediately after excision and then stored at -70°C. The mouse brain tissue membrane is provided in a buffer including HEPES (pH 7.9), MgCl<sub>2</sub>, KCl, EDTA, Sucrose, Glycerol, Sodium deoxycholate, NP-40, and a cocktail of protease inhibitors. For quality control purposes, the brain tissue pattern on SDS-PAGE gel is shown to be consistent for each lot by visualization with coomassie blue staining. The isolated brain tissue membrane protein is then Western analyzed by either GAPDH or  $\beta$ -actin antibody, and the expression level is consistent with each lot.

**Diagnosis**                     Normal

**Storage Buffer**                HEPES pH 7.9, MgCl<sub>2</sub>, KCl, EDTA, Sucrose, Glycerol, Sodium deoxycholate, and NP-40.

 45-1 Ramsey Road, Shirley, NY 11967, USA

**Storage Instruction**

Store at 2-8°C for continuous use. For extended storage, freeze working aliquots at -70°C. Repeated freezing and thawing is not recommended. Under proper storage conditions the shelf life is half a year from the date of receipt.

**Applications**

Brain membrane lysate is for use in Western blotting, 10 µg to 20 µg per lane is recommended for mini gel.
