

Active Recombinant Mouse Btc Protein

Cat. No. Btc-193B Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Mouse Btc Protein without tag was expressed in HEK 293.
Species	Mouse
Source	HEK293
Description	Betacellulin, also known as BTC, belongs to the EGF family of growth factors. It is expressed in many tissues, such as kidney, pancreas and small intestine. Betacellulin is initially synthesized as a membrane-bound precursor containing multiple EGF-like domains in its extracellular region, and is released from the membrane by proteolytic cleavage. BTC is the ligand for EGFR/ErbB receptor tyrosine kinases, and plays a role in cell growth and differentiation. BTC has been reported to promote beta cell growth and differentiation in the pancreas. Pancreas-specific expression of this gene may induce islet neogenesis and remediate hyperglycemia in type I diabetes.
Form	Sterile Filtered White lyophilized (freeze-dried) powder.
Bio-activity	ED50 < 0.08 ng/mL, measured in a cell proliferation assay using 3T3 cells.
