

Recombinant Human CFBF Protein (M1-P182), His tagged

Cat. No. CBFB-0484H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human 6His-strepII-TEV-GG-CBFB(M1-P182 end) Protein was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	M1-P182
Description	<p>Forms the heterodimeric complex core-binding factor (CBF) with RUNX family proteins (RUNX1, RUNX2, and RUNX3). RUNX members modulate the transcription of their target genes through recognizing the core consensus binding sequence 5'-TGTGGT-3', or very rarely, 5'-TGCGGT-3', within their regulatory regions via their runt domain, while CFBF is a non-DNA-binding regulatory subunit that allosterically enhances the sequence-specific DNA-binding capacity of RUNX. The heterodimers bind to the core site of a number of enhancers and promoters, including murine leukemia virus, polyomavirus enhancer, T-cell receptor enhancers, LCK, IL3 and GM-CSF promoters. CBF complexes repress ZBTB7B transcription factor during cytotoxic (CD8+) T cell development. They bind to RUNX-binding sequence within the ZBTB7B locus acting as transcriptional silencer and allowing for cytotoxic T cell differentiation.</p>
