

Recombinant Mouse CD274 Protein, IgG2a Fc-tagged

Cat. No. CD274-714M Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Mouse CD274 Protein, was expressed in HEK293 with mouse IgG2a Fc tag.
Species	Mouse
Source	HEK293
ProteinLength	290
Description	<p>The protein encoded by this gene is an immune inhibitory receptor ligand that is expressed by hematopoietic and non-hematopoietic cells, such as T cells and B cells and various types of tumor cells. The encoded protein is a type I transmembrane protein that has immunoglobulin V-like and C-like domains. Interaction of this ligand with its receptor inhibits T-cell activation and cytokine production. During infection or inflammation of normal tissue, this interaction is important for preventing autoimmunity by maintaining homeostasis of the immune response. In tumor microenvironments, this interaction provides an immune escape for tumor cells through cytotoxic T-cell inactivation. Mice deficient for this gene display a variety of phenotypes including decreased allogeneic fetal survival rates and severe experimental autoimmune encephalomyelitis.</p>
Form	Lyophilized
