

Recombinant Monkey CD36 Protein

Cat. No. CD36-001M Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Monkey CD36 Protein (aa.30-440) without tag was expressed in HEK293.
Species	Monkey
Source	HEK293
ProteinLength	30-440 a.a.
Description	<p>The protein encoded by this gene is the fourth major glycoprotein of the platelet surface and serves as a receptor for thrombospondin in platelets and various cell lines. Since thrombospondins are widely distributed proteins involved in a variety of adhesive processes, this protein may have important functions as a cell adhesion molecule. It binds to collagen, thrombospondin, anionic phospholipids and oxidized LDL. It directly mediates cytoadherence of Plasmodium falciparum parasitized erythrocytes and it binds long chain fatty acids and may function in the transport and/or as a regulator of fatty acid transport. Mutations in this gene cause platelet glycoprotein deficiency. Multiple alternatively spliced transcript variants have been found for this gene.</p>
