

Recombinant Human CD3E Protein, His-tagged

Cat. No. CD3E-141H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant human CD3E protein with His tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	207
Description	The protein encoded by this gene is the CD3-epsilon polypeptide, which together with CD3-gamma, -delta and -zeta, and the T-cell receptor alpha/beta and gamma/delta heterodimers, forms the T-cell receptor-CD3 complex. This complex plays an important role in coupling antigen recognition to several intracellular signal-transduction pathways. The genes encoding the epsilon, gamma and delta polypeptides are located in the same cluster on chromosome 11. The epsilon polypeptide plays an essential role in T-cell development. Defects in this gene cause immunodeficiency. This gene has also been linked to a susceptibility to type I diabetes in women.
