

Recombinant Human CD48 Protein

Cat. No. CD48-646H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant human CD48 protein without tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	243
Description	This gene encodes a member of the CD2 subfamily of immunoglobulin-like receptors which includes SLAM (signaling lymphocyte activation molecules) proteins. The encoded protein is found on the surface of lymphocytes and other immune cells, dendritic cells and endothelial cells, and participates in activation and differentiation pathways in these cells. The encoded protein does not have a transmembrane domain, however, but is held at the cell surface by a GPI anchor via a C-terminal domain which maybe cleaved to yield a soluble form of the receptor. Multiple transcript variants encoding different isoforms have been found for this gene.
