

Recombinant Human CD63 Protein

Cat. No. CD63-0840H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Human CD63 full-length ORF (NP_001771.1) recombinant protein without tag.
Species	Human
Source	Wheat Germ
Description	<p>The protein encoded by this gene is a member of the transmembrane 4 superfamily, also known as the tetraspanin family. Most of these members are cell-surface proteins that are characterized by the presence of four hydrophobic domains. The proteins mediate signal transduction events that play a role in the regulation of cell development, activation, growth and motility. The encoded protein is a cell surface glycoprotein that is known to complex with integrins. It may function as a blood platelet activation marker. Deficiency of this protein is associated with Hermansky-Pudlak syndrome. Also this gene has been associated with tumor progression. Alternative splicing results in multiple transcript variants encoding different protein isoforms. [provided by RefSeq, Apr 2012]</p>
