

Recombinant Human CD74, Myc-DDK-Tagged

Cat. No. CD74-2228H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Purified recombinant protein of Homosapiens CD74 molecule, major histocompatibility complex, class II invariant chain (CD74), transcript variant 1
Species	Human
Source	HEK293
Description	The protein encoded by this gene associates with class II major histocompatibility complex (MHC) and is an important chaperone that regulates antigen presentation for immune response. It also serves as cell surface receptor for the cytokine macrophage migration inhibitory factor (MIF) which, when bound to the encoded protein, initiates survival pathways and cell proliferation. This protein also interacts with amyloid precursor protein (APP) and suppresses the production of amyloid beta (Abeta). Multiple alternatively spliced transcript variants encoding different isoforms have been identified.
Tags	C-terminal Myc/DDK
Molecular weight	33.3 kDa
Endotoxin	< 0.1 EU per 1 µg of the protein by the LAL
Purity	> 80% as determined by SDS-PAGE and Coomassie blue staining.
Concentration	> 50 µg/ml as determined by BCA.
