

Recombinant Human CDKN1B Protein, DDK-tagged

Cat. No. CDKN1B-006H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant protein of full length human cyclin-dependent kinase inhibitor 1B (p27, Kip1) (CDKN1B), with C-terminal DDK tag, was expressed in sf9.
Species	Human
Source	Insect Cells
Description	<p>This gene encodes a cyclin-dependent kinase inhibitor, which shares a limited similarity with CDK inhibitor CDKN1A/p21. The encoded protein binds to and prevents the activation of cyclin E-CDK2 or cyclin D-CDK4 complexes, and thus controls the cell cycle progression at G1. The degradation of this protein, which is triggered by its CDK dependent phosphorylation and subsequent ubiquitination by SCF complexes, is required for the cellular transition from quiescence to the proliferative state. Mutations in this gene are associated with multiple endocrine neoplasia type IV (MEN4). [provided by RefSeq, Apr 2014]</p>
