

## Recombinant Human CEACAM1 Protein, MYC/DDK-tagged

Cat. No. CEACAM1-3171H Lot. No. (See product label)

### SPECIFICATION

**Product Overview** Recombinant Human CEACAM1 protein, fused to MYC/DDK-tagged at C-terminus, was expressed in HEK293.

**Species** Human

**Source** HEK293

**Description** This gene encodes a member of the carcinoembryonic antigen (CEA) gene family, which belongs to the immunoglobulin superfamily. Two subgroups of the CEA family, the CEA cell adhesion molecules and the pregnancy-specific glycoproteins, are located within a 1.2 Mb cluster on the long arm of chromosome 19. Eleven pseudogenes of the CEA cell adhesion molecule subgroup are also found in the cluster. The encoded protein was originally described in bile ducts of liver as biliary glycoprotein. Subsequently, it was found to be a cell-cell adhesion molecule detected on leukocytes, epithelia, and endothelia. The encoded protein mediates cell adhesion via homophilic as well as heterophilic binding to other proteins of the subgroup. Multiple cellular activities have been attributed to the encoded protein, including roles in the differentiation and arrangement of tissue three-dimensional structure, angiogenesis, apoptosis, tumor suppression, metastasis, and the modulation of innate and adaptive immune responses. Multiple transcript variants encoding different isoforms have been reported, but the full-length nature of all variants has not been defined.

**Form** 25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10% glycerol.

<b>Molecular Mass</b>	50.8 kDa
<b>Purity</b>	> 80% as determined by SDS-PAGE and Coomassie blue staining
<b>Concentration</b>	>50 ug/mL as determined by microplate BCA method

## GENE INFORMATION

<b>Gene Name</b>	CEACAM1 carcinoembryonic antigen-related cell adhesion molecule 1 (biliary glycoprotein) [ Homo sapiens ]
<b>Official Symbol</b>	CEACAM1
<b>Synonyms</b>	BGP; BGP1; BGPI
<b>Gene ID</b>	634
<b>mRNA Refseq</b>	NM_001024912
<b>Protein Refseq</b>	NP_001020083
<b>MIM</b>	109770
<b>UniProt ID</b>	P13688
