

Native Jackbean seeds Concanavalin A Lectin (Con A), MagneZoom™-Conjugated

Cat. No. Con A-414J **Lot. No.** (See product label)

SPECIFICATION

Product Overview	<p>Native Jackbean seeds Concanavalin A Lectin (Con A) - MagneZoom™</p> <p>Blood Group Specificity: Non-specific</p> <p>Preferred Sugar Specificity: αMannose, αGlc</p> <p>Mitogenic Activity: No</p> <p>Hazardous Shipping: Non-hazardous</p>
Species	<p>Jackbean seeds</p>
Source	<p>Jackbean seeds</p>
Description	<p>Affinity purified concanavalin A (Con A) is composed of two identical subunits of 237 amino acid residues (MW: 26,000 without any cystine residues). It exhibits mitogenic activity with lymphocytes and cancer cells. While lymphocytes and cancer aggregate by Con A; normal white cells do not. Normal cells react to Con A after proteolytic treatment which suggests that trypsinization causes clustering of the reactive glycan residues on the membrane. Con A interacts with cell types include locust muscle fibers, adipocytes, and rat liver plasma membrane components. This lectin induces endoreduplication in mammalian cells and it reacts with E. coli, Dictyostelium discoideum and Bacillus lipopolysaccharides. Immobilized Con A has been used in affinity chromatography purifications of a wide variety of glycoproteins and cellular structures. Affinity purified Concanavalin A (Jackbean) Lectin (Con A) is immobilized on aminated paramagnetic beads using EDC and stabilized in a buffer to retain maximum activity. These beads are ideal for iP applications to pull down</p>

glycoproteins.

Form

Liquid

Purity

High Purity Grade

Stability

Shelf Life: 1 year

Storage

At 2-8 centigrade.

GENE INFORMATION**Official Symbol**

Con A

Synonyms

Concanavalin A Lectin; Con A
