

Recombinant Human DHPS Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. DHPS-4650H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	DHPS MS Standard C13 and N15-labeled recombinant protein (NP_001921) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a protein that is required for the formation of hypusine, a unique amino acid formed by the posttranslational modification of only one protein, eukaryotic translation initiation factor 5A. The encoded protein catalyzes the first step in hypusine formation by transferring the butylamine moiety of spermidine to a specific lysine residue of the eukaryotic translation initiation factor 5A precursor, forming an intermediate deoxyhypusine residue. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene.
