Cat. No. EGFR-41H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human EGFR Protein (695-end aa, G719S mutation), was expressed in Sf9 insect cells (via baculovirus) with N-terminal GST tag.
Species	Human
Source	Sf9 Cells
ProteinLength	695-end a.a.
Description	EGFR is the receptor for members of the EGF family and is a transmembrane glycoprotein that has tyrosine kinase activity. Binding of epidermal growth factor to EGFR induces receptor dimerization and tyrosine autophosphorylation and leads to cell proliferation, differentiation, motility, and cell survival. Activation of EGFR triggers mitogenic signaling in gastrointestinal mucosa, and its expression is upregulated in colon cancers and most neoplasms. Activation of EGFR triggers activation of the ERK-signaling pathway in normal gastric epithelial and colon cancer cell lines. Inactivation of EGFR with selective inhibitors significantly reduces ERK2 activation, c-fos mRNA expression and cell proliferation.
