

Recombinant Mouse Epha1, GST-tagged, Active

Cat. No. Epha1-299M Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant mouseEpha1 (569-end) was expressed by baculovirus in Sf9 insect cells using an N-terminal GST tag. MW=71 kDa.
Species	Mouse
Source	Sf9 Cells
ProteinLength	569-end a.a.
Description	<p>Epha1 is a member of the Eph family of receptor tyrosine kinases that have been implicated in mediating developmental events, particularly in the nervous system. Receptors in the Eph subfamily typically have a single kinase domain and an extracellular region containing a Cys-rich domain and 2 fibronectin type III repeats. EPHA1 seems to be a marker of the differentiated normal epidermis and its downregulation in nonmelanoma skin cancer may contribute to carcinogenesis of these very frequent human tumors. EPHA1 represents a new potential prognostic marker and therapeutic target in nonmelanoma skin cancer.</p>
Sequence	569-end.
Applications	Kinase Assay, Western Blot.
Storage And Stability	Store product at -70°C . For optimal storage, aliquot target into smaller quantities after centrifugation and store at recommended temperature. For most favorable performance, avoid repeated handling and multiple freeze/thaw cycles.
