

Recombinant Human FGF23 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. FGF23-3431H Lot. No. (See product label)

SPECIFICATION

Product Overview	FGF23 MS Standard C13 and N15-labeled recombinant protein (NP_065689) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the fibroblast growth factor family of proteins, which possess broad mitogenic and cell survival activities and are involved in a variety of biological processes. The product of this gene regulates phosphate homeostasis and transport in the kidney. The full-length, functional protein may be deactivated via cleavage into N-terminal and C-terminal chains. Mutation of this cleavage site causes autosomal dominant hypophosphatemic rickets (ADHR). Mutations in this gene are also associated with hyperphosphatemic familial tumoral calcinosis (HFTC).
