

Recombinant Human FGF9 Protein, Fc-tagged

Cat. No. FGF9-554H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant human FGF9 protein with Fc tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	208
Description	<p>The protein encoded by this gene is a member of the fibroblast growth factor (FGF) family. FGF family members possess broad mitogenic and cell survival activities, and are involved in a variety of biological processes, including embryonic development, cell growth, morphogenesis, tissue repair, tumor growth and invasion. This protein was isolated as a secreted factor that exhibits a growth-stimulating effect on cultured glial cells. In nervous system, this protein is produced mainly by neurons and may be important for glial cell development. Expression of the mouse homolog of this gene was found to be dependent on Sonic hedgehog (Shh) signaling. Mice lacking the homolog gene displayed a male-to-female sex reversal phenotype, which suggested a role in testicular embryogenesis.</p>
