

Recombinant Human FHIT Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. FHIT-715H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	FHIT MS Standard C13 and N15-labeled recombinant protein (NP_002003) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a P1-P3-bis(5'-adenosyl) triphosphate hydrolase involved in purine metabolism. This gene encompasses the common fragile site FRA3B on chromosome 3, where carcinogen-induced damage can lead to translocations and aberrant transcripts. In fact, aberrant transcripts from this gene have been found in about half of all esophageal, stomach, and colon carcinomas. The encoded protein is also a tumor suppressor, as loss of its activity results in replication stress and DNA damage.
