

Recombinant Human GAL Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. GAL-3801H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	GAL MS Standard C13 and N15-labeled recombinant protein (NP_057057) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a neuroendocrine peptide that is widely expressed in the central and peripheral nervous systems and also the gastrointestinal tract, pancreas, adrenal gland and urogenital tract. The encoded protein is a precursor that is proteolytically processed to generate two mature peptides: galanin and galanin message-associated peptide (GMAP). Galanin has diverse physiological functions including nociception, feeding and energy homeostasis, osmotic regulation and water balance. GMAP has been demonstrated to possess antifungal activity and hypothesized to be part of the innate immune system.
