

Recombinant Human Growth Hormone 2

Cat. No. GH2-348H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant 20KDa human growth hormone was purified by FPLC gel-filtration chromatography, after refolding of the isolated inclusion bodies in a renaturation buffer.
Species	Human
Source	Human
Description	The 20 kDa variant form of human growth hormone (20 kDa hGH) presents in extracts from pituitary glands and it differs from the major form of hGH (22kDa, 191 amino acids) by the deletion of amino acid residues 32-46. The physiological role of 20K hGH remains to be determined partly but the main function is regarded as stimulation of somatic and bone growth, as well as an increase in the size and mass of organs and tissues.
