

Recombinant Human GOLGA1 cell lysate

Cat. No. GOLGA1-725HCL Lot. No. (See product label)

SPECIFICATION

Species

Human

Description

The Golgi apparatus, which participates in glycosylation and transport of proteins and lipids in the secretory pathway, consists of a series of stacked cisternae (flattened membrane sacs). Interactions between the Golgi and microtubules are thought to be important for the reorganization of the Golgi after it fragments during mitosis. The golgins are a family of proteins, of which the protein encoded by this gene is a member, that are localized to the Golgi. This encoded protein is associated with Sjogrens syndrome.
