

Recombinant Human GP9 Protein, His tagged

Cat. No. GP9-7219H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human GP9 Protein with His tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	17-147 aa
Description	This gene encodes a small membrane glycoprotein found on the surface of human platelets. It forms a 1-to-1 noncovalent complex with glycoprotein Ib, a platelet surface membrane glycoprotein complex that functions as a receptor for von Willebrand factor. The complete receptor complex includes noncovalent association of the alpha and beta subunits with the protein encoded by this gene and platelet glycoprotein V. Defects in this gene are a cause of Bernard-Soulier syndrome, also known as giant platelet disease. These patients have unusually large platelets and have a clinical bleeding tendency.
