

Recombinant Human GPER Protein

Cat. No. GPER-5154H Lot. No. (See product label)

SPECIFICATION

Product Overview	Human GPER full-length ORF (NP_001496.1) recombinant protein without tag.
Species	Human
Source	Wheat Germ
Description	This gene is a member of the G-protein coupled receptor 1 family and encodes a multi-pass membrane protein that localizes to the endoplasmic reticulum. The protein binds estrogen, resulting in intracellular calcium mobilization and synthesis of phosphatidylinositol 3,4,5-trisphosphate in the nucleus. This protein therefore plays a role in the rapid nongenomic signaling events widely observed following stimulation of cells and tissues with estrogen. Alternate transcriptional splice variants which encode the same protein have been characterized. [provided by RefSeq]
