

Active Recombinant Influenza A H3N2 (A/Perth/16/2009) HA-specific B cell probe Protein (Met1-Gly519) (Tyr 108 Phe), His-tagged

Cat. No. HA-4891H Lot. No. (See product label)

SPECIFICATION

Product Overview A DNA sequence encoding the Influenza A virus (A/Perth/16/2009 (H3N2)) hemagglutinin (ACS71642.1) (Met1-Lys519, with a mutation Tyr 108 Phe), was expressed with a polyhistidine tag at the C-terminus.

Species H3N2

Source Insect Cells

ProteinLength Met1-Gly519

Description The influenza viral Hemagglutinin (HA) protein is a homo trimer with a receptor binding pocket on the globular head of each monomer. HA has at least 18 different antigens. These subtypes are named H1 through H18. HA has two functions. Firstly, it allows the recognition of target vertebrate cells, accomplished through the binding to these cells' sialic acid-containing receptors. Secondly, once bound it facilitates the entry of the viral genome into the target cells by causing the fusion of host endosomal membrane with the viral membrane. The influenza virus Hemagglutinin (HA) protein is translated in cells as a single protein, HA, or hemagglutinin precursor protein. For viral activation, hemagglutinin precursor protein (HA) must be cleaved by a trypsin-like serine endoprotease at a specific site, normally coded for by a single basic amino acid (usually arginine) between the HA1 and HA2 domains of the protein. After cleavage, the two disulfide-bonded protein domains produce the mature form of the

	protein subunits as a prerequisite for the conformational change necessary for fusion and hence viral infectivity.
Predicted N Terminal	Gln 17
Form	Lyophilized from sterile 20 mM Tris, 500 mM NaCl, pH 7.4. Please contact us for any concerns or special requirements. Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as protectants before lyophilization.
Bio-activity	Testing in progress
Molecular Mass	The recombinant hemagglutinin of Influenza A virus (A/Perth/16/2009 (H3N2)) consists of 514 amino acids and predicts a molecular mass of 58 kDa.
Endotoxin	< 1.0 EU per µg protein as determined by the LAL method.
Purity	> 95 % as determined by SDS-PAGE.
Stability	Samples are stable for up to twelve months from date of receipt at -20°C to -80°C
Storage	Store it under sterile conditions at -20°C to -80°C. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.
Reconstitution	It is recommended that sterile water be added to the vial to prepare a stock solution of 0.2 ug/ul. Centrifuge the vial at 4°C before opening to recover the entire contents.
Shipping	In general, recombinant proteins are provided as lyophilized powder which are shipped at ambient temperature. Bulk packages of recombinant proteins are provided as frozen liquid. They are shipped out with blue ice unless customers require otherwise.
