

Recombinant Full Length Human HBG2 Protein, GST-tagged

Cat. No. HBG2-3495HF Lot. No. (See product label)

SPECIFICATION

Product Overview	Human HBG2 full-length ORF (AAH10914.1, 1 a.a. - 147 a.a.) recombinant protein with GST-tag at N-terminal.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	147 amino acids
Description	The gamma globin genes (HBG1 and HBG2) are normally expressed in the fetal liver, spleen and bone marrow. Two gamma chains together with two alpha chains constitute fetal hemoglobin (HbF) which is normally replaced by adult hemoglobin (HbA) at birth. In some beta-thalassemias and related conditions, gamma chain production continues into adulthood. The two types of gamma chains differ at residue 136 where glycine is found in the G-gamma product (HBG2) and alanine is found in the A-gamma product (HBG1). The former is predominant at birth. The order of the genes in the beta-globin cluster is: 5- epsilon -- gamma-G -- gamma-A -- delta -- beta-3. [provided by RefSeq]
