

Recombinant Human HEPACAM Protein, MYC/DDK-tagged

Cat. No. HEPACAM-1101H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human HEPACAM protein, fused to MYC/DDK tag at C-terminus, was expressed in HEK293.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a single-pass type I membrane protein that localizes to the cytoplasmic side of the cell membrane. The encoded protein acts as a homodimer and is involved in cell motility and cell-matrix interactions. The expression of this gene is downregulated or undetectable in many cancer cell lines, so this may be a tumor suppressor gene. [provided by RefSeq, Jul 2011].
