

Recombinant Human HSPB8 Protein

Cat. No. HSPB8-045H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant human HSPB8 protein without tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	196
Description	The protein encoded by this gene belongs to the superfamily of small heat-shock proteins containing a conservative alpha-crystallin domain at the C-terminal part of the molecule. The expression of this gene is induced by estrogen in estrogen receptor-positive breast cancer cells, and this protein also functions as a chaperone in association with Bag3, a stimulator of macroautophagy. Thus, this gene appears to be involved in regulation of cell proliferation, apoptosis, and carcinogenesis, and mutations in this gene have been associated with different neuromuscular diseases, including Charcot-Marie-Tooth disease.
