

Recombinant Human IDS Protein, Full Length, C-10xHis tagged

Cat. No. IDS-18HFL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human IDS Protein (Full Length) with C-10xHis tag was expressed in Mouse myeloma cell line.
Species	Human
Source	Mouse myeloma cell
ProteinLength	Full Length
Description	This gene encodes a member of the sulfatase family of proteins. The encoded preproprotein is proteolytically processed to generate two polypeptide chains. This enzyme is involved in the lysosomal degradation of heparan sulfate and dermatan sulfate. Mutations in this gene are associated with the X-linked lysosomal storage disease mucopolysaccharidosis type II, also known as Hunter syndrome. Alternative splicing results in multiple transcript variants, at least one of which encodes a preproprotein that is proteolytically processed.
Bio-activity	Measured by its ability to hydrolyze the substrate 4-Nitrocatechol Sulfate (PNCS). The specific activity is > 1.0 pmol/min/μg, as measured under the described conditions.
Molecular Mass	Predicted Molecular Mass: 61 kDa SDS-PAGE: Multiple bands between 74-91 kDa, reducing conditions
Endotoxin	<1.0 EU/μg of the protein by the LAL method.
