

Recombinant Human IFNG therapeutic protein (Interferon gamma-1b)

Cat. No. IFNG-P011H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Human Interferon gamma-1b (140 residues), produced from E. coli. Production of Actimmune is achieved by fermentation of a genetically engineered Escherichia coli bacterium containing the DNA which encodes for the human protein. Purification of the product is achieved by conventional column chromatography. The sequence displayed is a cDNA sequence which codes for human interferon gamma, as described by Gray et. al. and not specifically interferon gamma 1b.
Species	Human
Source	E.coli
ProteinLength	146aa
Description	This gene encodes a member of the type II interferon family. The protein encoded is a soluble cytokine with antiviral, immunoregulatory and anti-tumor properties and is a potent activator of macrophages. Mutations in this gene are associated with aplastic anemia. The expression product is the active ingredient of Actimmune.
