

Recombinant Human IGFL1 Protein, MYC/DDK-tagged

Cat. No. IGFL1-502H Lot. No. (See product label)

SPECIFICATION

Product Overview Recombinant Human IGFL1 fused with MYC/DDK tag at C-terminal was expressed in HEK293.

Species Human

Source HEK293

Description The protein encoded by this gene is a member of the insulin-like growth factor family of signaling molecules. The encoded protein is synthesized as a precursor protein and is proteolytically cleaved to form a secreted mature peptide. The mature peptide binds to a receptor, which in mouse was found on the cell surface of T cells. Increased expression of this gene may be linked to psoriasis.

Form 25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10% glycerol.

Molecular Mass 12.2 kDa

Purity > 80% as determined by SDS-PAGE and Coomassie blue staining

Concentration >50 ug/mL as determined by microplate BCA method

GENE INFORMATION

Gene Name IGFL1 IGF-like family member 1 [Homo sapiens]
