

Recombinant Human INHBA Protein (AA 21-426), N-GFP/His-Tagged

Cat. No. INHBA-32H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human INHBA Protein (AA 21-426) with N-GFP/His tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	AA 21-426
Description	This gene encodes a member of the TGF-beta (transforming growth factor-beta) superfamily of proteins. The encoded preproprotein is proteolytically processed to generate a subunit of the dimeric activin and inhibin protein complexes. These complexes activate and inhibit, respectively, follicle stimulating hormone secretion from the pituitary gland. The encoded protein also plays a role in eye, tooth and testis development. Elevated expression of this gene may be associated with cancer cachexia in human patients.
