

Active Recombinant Mouse Il28a Protein

Cat. No. Il28a-5202M **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Mouse Il28a (Q4VK74) partial recombinant protein expressed in Escherichia coli.
Species	Mouse
Source	E.coli
Description	Interleukin-28 (IL-28) is a cytokine that comes in two isoforms, IL-28A and IL-28B, and plays a role in immune defense against viruses, including the induction of an "antiviral state" by turning on Mx proteins, 2',5'-oligoadenylate synthetase as well as ISGF3G (Interferon Stimulated Gene Factor 3). IL-28A and IL-28B belong to the type III interferon family of cytokines and are highly similar (in amino acid sequence) to IL-29. Their classification as Interferons is due to their ability to induce an antiviral state, while their additional classification as cytokines is due to their chromosomal location as well as the fact that they are encoded by multiple exons, as opposed to a single exon, as most type-I IFNs are.
