

Recombinant Human KCNIP2 Protein, Myc/DDK-tagged, C13 and N15-labeled

Cat. No. KCNIP2-4884H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	KCNIP2 MS Standard C13 and N15-labeled recombinant protein (NP_055406) with a C-terminal MYC/DDK tag, was expressed in HEK293 cells.
Species	Human
Source	HEK293
Description	This gene encodes a member of the family of voltage-gated potassium (Kv) channel-interacting proteins (KCNIPs), which belongs to the recoverin branch of the EF-hand superfamily. Members of the KCNIP family are small calcium binding proteins. They all have EF-hand-like domains, and differ from each other in the N-terminus. They are integral subunit components of native Kv4 channel complexes. They may regulate A-type currents, and hence neuronal excitability, in response to changes in intracellular calcium. Multiple alternatively spliced transcript variants encoding distinct isoforms have been identified from this gene.
